³ Internal data, % calculated on the basis of the number of complaints received compared to the number of units sold during the same period.

* Actual rates per implant, all cohorts were pooled in this analysis.

** Reoperation rates for complications deriving specifically from the product.

Why choose the Round Collection™

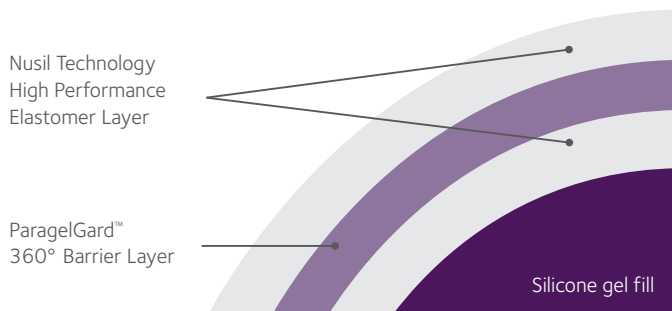

The Round Collection provides a wide range of products, including smooth and microtextured surfaces, two types of gel cohesivity, and four different projections – from low to extra-high.

Paragel™

Paragel is the high cohesive, medical grade gel, used in all Eurosilicone implants. It provides controlled gel distribution and is available in both Soft and Natural cohesivities; giving more options to surgeons and patients.

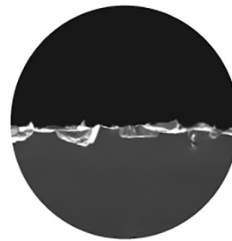

ParagelGard™ 360° Barrier Layer

ParagelGard™ 360° is Eurosilicone's protective barrier, which has specific technology designed to minimise gel diffusion. The barrier is also present at the product patch, completely covering the implant.

Cristalline™ Texture

The Round Collection uses the microtexture silicone shell surface, which is designed to offer tissue adhesion, minimising rotation and capsular contracture.

Cristalline™ Microtextured

Proven Safety through Clinical data.

Eurosilicone breast implants have been used by physicians around the world for almost 30 years. During this time, long term performance data has been collected via clinical studies, as well as internal safety data, which demonstrates both high quality and safety of our product range.

Ongoing Post Market Clinical Study.
